SUMMARY

Aspiring DevOps and Cloud Engineer with a Bachelor of Information Technology (BIT), experienced in Docker, Linux, Git, CI/CD pipelines, and Terraform. Completed comprehensive DevOps training, gaining practical experience in containerization, automation, Kubernetes, and AWS. Passionate about designing scalable, reliable systems and streamlining deployment workflows through modern DevOps practices.

EDUCATION

Padmashree College , Nilai University	2022 – 2026
Bachelor of Information Technology (Hons)	
+2, Khowpa Secondary School	2020 – 2022

TECHNICAL SKILLS

Programming	Python, Java, C++, JavaScript
DevOps Tools	Docker, Docker Compose, Docker Swarm (basic)
CI/CD	GitHub Actions (basic), Jenkins (basic)
Cloud	AWS (EC2, S3 – basic understanding)
Operating Systems	Linux (Ubuntu), Windows
Networking	Basic routing, switching, troubleshooting
Version Control	Git, GitHub
Tools	Nginx, Power BI, Excel
Soft Skills	Problem-solving, Communication, Teamwork, Quick Learner

PROJECTS

Production-Grade E-Commerce API with Kubernetes & Helm

Built a scalable Node.js REST API with PostgreSQL and Redis, containerized using Docker Compose and deployed on Kubernetes (KIND) with liveness/readiness probes, Secrets, and ConfigMaps. Implemented GitHub Actions CI/CD pipeline for automated build and deployment. Instrumented application metrics using Prometheus (RED method) and visualized with Grafana dashboards. Packaged the application using Helm charts for multi-environment deployment.

Technologies: Node.js, PostgreSQL, Redis, Docker, Kubernetes, Helm, GitHub Actions, Prometheus, Grafana

To-Do Web Application Developed a task management web application with features for task creation and organization. Utilized GitHub for version control, repository management, and documentation. *Technologies: JavaScript, Git, GitHub*

Multi-Container Application with Docker Compose Designed and deployed a multi-container setup using Docker Compose with Nginx and backend services. Configured inter-service communication and environment-based settings. *Technologies: Docker Compose, Nginx*

CI/CD Pipeline using GitHub Actions Implemented a CI workflow to automatically build and test Docker images on each push, improving development workflow efficiency. *Technologies: GitHub Actions, Docker*

CERTIFICATIONS & TRAINING

DevOps Training Program – TechAxis	2025
Hands-on training covering Docker, CI/CD pipelines (GitHub Actions), Linux system management, foundational Kubernetes concepts, and AWS.
